## JSON-LD 1.1

- It's been over three years since JSON-LD 1.0 was published, and feature requests have been mounting:
  - 36 issues addressed since 1.0 (15 still open)
  - Use objects to index into collections, rather than only array form
    - Previously restricted to @index and @language. Now available on @id and @type.
    - Can include @set with other container types (e.g.: "@container": ["@set", "@language"]).
  - Framing, never complete in 1.0. Now provides ability to match on @id, inclusive or exclusive @type, property values, and specifics of a value object. Supports framing of datasets, not just graphs.
  - Contexts scoped to terms: property values or entities using a given type term can overlay terms-specific contexts.
  - Ignore some elements of JSON structure.
  - Abstract from JSON-itself, allowing for <u>YAML</u>, <u>CBOR</u> and other LD representations.

## Version Announcement

 For backwards compatibility, version 1.1 must be specified to use new 1.1 features (may be through API).

```
"@context":
{
    "@version": 1.1,
    "schema": "http://schema.org/",
    "name": "schema:name",
    "body": "schema:articleBody",
    "words": "schema:wordCount",
    "post": {
        "@id": "schema:blogPost",
        "@container": "@id"
    }
},

"@id": "http://example.com/",
    "@type": "schema:Blog",
    "name": "World Financial News",
    ""
```
